germ layers (dome - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)

dorsal / ventral (gastrula) (30% epiboly - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)

axial and dorsal midline (50% epiboly - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)
atlas, aligned
atlas, unaligned
dorsal_forerunner (880 cells)
prechordal_plate (991 cells)
axial_mesoderm (583 cells)
notochord (47 cells)
hatching_gland (320 cells)
several (2345 cells, 45% of active)
none active
no program defined

mesoderm (segmentation) (50% epiboly - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)
atlas, aligned
atlas, unaligned
presomitic_mesoderm (4353 cells)
adaxial_somite (26 cells)
lateral_plate (675 cells)
intermediate_mesoderm (124 cells)
tailbud (1171 cells)
notochord (295 cells)
several (2911 cells, 30% of active)
none active
no program defined

neural regions (75% epiboly - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)
