a how much can be explained (bars: range over libraries)
explainable share of the floor loss
heterogeneous genes
other measured genes
b how much each set explains
explained fraction (heterogeneous genes)
Farrell et al.
ZFIN terms
ZFIN terms, het. genes
curated
random (curated)
c supported programs
share of programs coherent in >= half of the libraries
d per evaluation gene, dome to 6-somite (dashed: tier floors)
pooled over the genes of a bin
explainable share of the floor loss
weak
moderate
strong
heterogeneity at the stage (median residual over libraries)
high
oblong
dome
30% epiboly
50% epiboly
shield
60% epiboly
75% epiboly
90% epiboly
bud
3-somite
6-somite
