germ layers (high - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)

dorsal / ventral (gastrula) (high - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)
atlas, aligned
atlas, unaligned
dorsal_organizer (2132 cells)
neural_plate (3071 cells)
non_neural_ectoderm (3944 cells)
several (1147 cells, 11% of active)
none active
no program defined

axial and dorsal midline (high - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)

mesoderm (segmentation) (high - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)
atlas, aligned
atlas, unaligned
presomitic_mesoderm (356 cells)
adaxial_somite (72 cells)
lateral_plate (349 cells)
intermediate_mesoderm (139 cells)
tailbud (1816 cells)
notochord (1028 cells)
several (8864 cells, 70% of active)
none active
no program defined

neural regions (high - 6-somite): cells by the active program of the group (smoothed score above the 99.9% permutation quantile)
