Program identities across K (label from database enrichment; [share of cells with usage > 0.2])
ID1 GO: positive regulation of apoptotic process [2.3%]
ID2 presumptive shield | GO: regionalization [3.1%]
ID3 presumptive endoderm | GO: gastrulation [9.5%]
ID4 epithelium | GO: intermediate filament-based process [1.5%]
ID5 reproductive system | GO: gamete generation [6.9%]
ID6 neural plate | GO: negative regulation of cell differentiation [62.8%]
ID7 presumptive mesoderm | GO: pattern specification process [19.9%]
ID8 GO: nucleosome organization [48.8%]
ID9 GO: chromosome condensation [5.2%]
ID10 presumptive shield | GO: anterior/posterior pattern specification [5.6%]
ID11 neural plate | GO: negative regulation of RNA metabolic process [90.3%]
ID12 endoderm | GO: endoderm development [2.5%]
