Recurrent DS5 programs (K=13): usage of each unit's member program

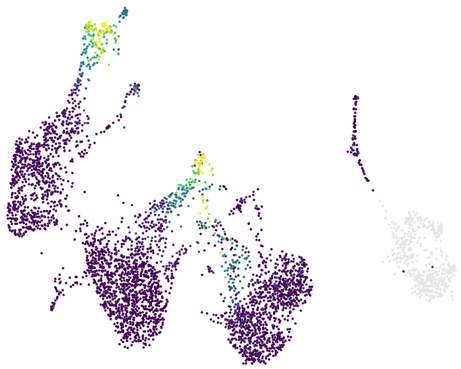

MP1: periderm | GO: intermediate

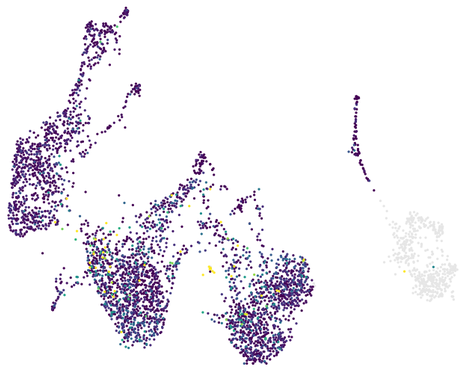

MP2: neural plate | GO: translati

MP3: marginal blastomere | GO: pa
(absent: high+oblong (pooled))

MP4: reproductive system | GO: pr
(absent: high+oblong (pooled))

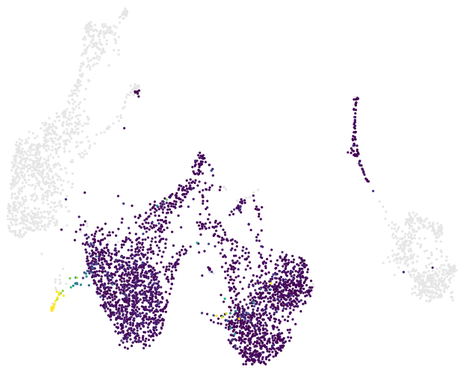

MP5: GO: G1/S transition of mitot
(absent: shield)

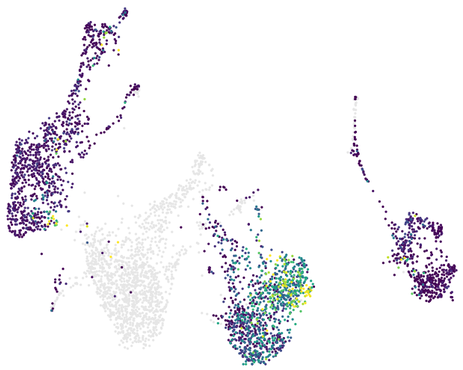

MP6: marginal blastomere | GO: pa
(absent: high+oblong (pooled), 30% a)

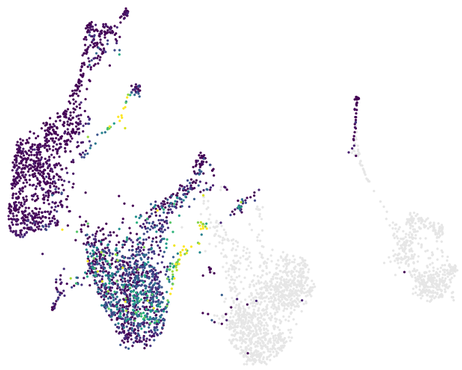

MP7: GO: positive regulation of a
(absent: high+oblong (pooled), shield)

MP8: GO: negative regulation of D
(absent: 30% a, 30% b)

MP9: margin | GO: regionalization
(absent: high+oblong (pooled), dome)

MP10: presumptive mesoderm | GO: p
(absent: high+oblong (pooled), dome, 30% a)

MP11: presumptive ectoderm | GO: e
(absent: high+oblong (pooled), dome, 30% a)
