50% epiboly program identities (stage 11) found in DS5 units
(shown when >= 10 of the top 50 genes are shared, q < 0.001; blank = no match)
ID1 GO: positive regulation of apoptotic process [4 lib]
ID2 presumptive shield | GO: regionalization [4 lib]
ID3 presumptive endoderm | GO: gastrulation [4 lib]
ID4 epithelium | GO: intermediate filament-based [4 lib]
ID5 reproductive system | GO: gamete generation [4 lib]
ID6 neural plate | GO: negative regulation of cel [4 lib]
ID7 presumptive mesoderm | GO: pattern specificat [4 lib]
ID8 GO: nucleosome organization [4 lib]
ID9 GO: chromosome condensation [4 lib]
ID10 presumptive shield | GO: anterior/posterior p [4 lib]
ID12 endoderm | GO: endoderm development [2 lib]
ID15 presumptive ectoderm | GO: epithelial tube mo [1 lib]
ID33 forerunner cell group | GO: regionalization [1 lib]
